LEARNING LOG 1

For the Period 3rd September 2025 to 12th September 2025

What have I done? (relate tasks to Learning Outcomes LO1, LO2, LO3, LO4, LO5 in your WRL form)

I learned about the company, my team, and my internship role during this session. To help me comprehend the different tasks I am expected to complete for the company, the supervisor described the various kinds of assignments. Additionally, different types of technicians were introduced during this phase to familiarize me with the organizational structure and technical roles within the company.

What I could improve on (i.e. skills I want to improve)

- To adjust to my internship role more quickly, I need to learn more about the company's internal procedures and workflow.
- My goal is to enhance my communication abilities so that I can engage with my teammates and technicians with greater assurance.
- I need to learn more about the various functions and duties that technicians have within the company.

Action I can take to improve my skills and learning.

Specific

- To gain a better understanding of how tasks are assigned and carried out, I must research the organization's workflow and operational procedures.
- To be clear about my role and expectations, I must communicate with my supervisor and team members on a regular basis.
- To comprehend their duties and working procedures, I must watch and learn from seasoned technicians.

Measurable

- I shall get familiar with the roles played by all the members and technicians involved in the session by noting them down.
- I am willing to participate in every task given to me and to carry out all assignments provided in the introduction by the supervisor.
- I intend to ask at least two related questions during each meeting to better understand how the company operates.

Achievable

- I am committed to self-learning by assisting team members and experienced technicians in their day-to-day activities.
- I will also look for guidance from my supervisor and others when I need to.
- Instructions and knowledge gained from the sessions would be utilized with my future assigned tasks.

Relevant

- These are just a few of the ways that these skills will enable me to better understand my roles and responsibilities in my organization and in my field of IT.

- They will also improve my capacity to comply strictly with the procedures of the company as well as aid the technicians on the tasks to be performed.

- These skills can enhance a professional communication, teamwork, and knowledge of workplace standards, skills that are very important to me.

Time-Bound

- I look to accomplish my initial orientation and knowledge of company processes in two weeks or less.

- I will start following proper documentation and notation techniques from the next assigned task.

- Additionally, I plan to closely monitor my progress of learnings on a weekly basis through guidance from my supervisor or team members.

Conclusion

The session has greatly helped me to understand the company itself, the working environment, and my role within it as an intern. I got to know my team members, the supervisor, and the different technicians within the organization. The assignments provided in this session gave me an overview of the tasks and responsibilities that I need to execute. This was an introductory phase, yet it served as a platform to get accustomed to the culture of the workplace and hone my communication and learning approach. Overall, the session contributed to my professional development and prepared me for further tasks within the company.

LEARNING LOG 2

For the Period 13th September 2025 to 22nd September 2025

What have I done? (relate tasks to Learning Outcomes LO1, LO2, LO3, LO4, LO5 in your WRL form)

During this session, I was introduced to several devices and equipment used by the company. The devices included switches, PoE switches, cameras, and cables like CAT 6 cables and CCTV cables. The devices were explained in detail by my supervisor on how they were used and their functionality. I realized how devices and equipment were picked and set up to accomplish specific tasks. In the process, I related what I had previously learned theoretically with what I could see in the practical world

What I did well and why it went well(refer to skills used)

- Actively listening to the supervisor's explanation of different tools and networking products was something I benefited from to grasp their usage.
- This is about identifying various networking devices such as switches, PoE switches, and cameras based on my fundamental knowledge in networking.
- Handling and examining the CAT 6 and CCTV cable with appropriate knowledge of the differences and uses.
- I made sure to ask pertinent questions and took notes. This allowed me to rapidly learn the goal of each tool and component.

What I could improve on (i.e. skills I want to improve)

- I want to improve my time management when handling multiple tasks in a single workday.
- I need to strengthen my knowledge of advanced camera configuration and smart device integration.
- I need to enhance documentation clarity for listing materials and network mappings.
- I need to improve my troubleshooting speed for network device testing and connectivity checks.

Action I can take to improve my skills and learning.

Specific

- I would need to focus on the learning of the specific configurations available in Smart Cameras & PoE devices.
- I must develop my skills in recognizing, managing, as well as choosing the best networking tools as well as cables according to my needs while conducting installations.
- I also need to improve my knowledge in relation to network testing as well as basic troubleshooting when dealing with a switch or its connected devices.

Measurable

- One online learning module on smart cameras, poe switches, or IoT device configuration must be fulfilled by this writer at least once.

- I will be happy to provide a clear RMC of Materials and Connectivity following each installation and/or practice task.

- I plan to observe my network test process and attempt to shorten my troubleshooting time by about 10% by using my improved knowledge and skills.

Achievable

- I will leverage free or low-cost online resources to build my knowledge in the areas of IoT devices, smart cameras, and networking equipment.

- I shall apply the newly learnt concepts to the upcoming on-site task involving switches, PoE devices, and cabling.

- I will avail myself of sometime each week for practice, reviewing network testing procedures and basic device configurations.

Relevant

- My work in networking, cabling, and smart device installations is directly supported by these abilities.

- They enhance my capacity to test, troubleshoot, and maintain dependable surveillance and network systems.

- Accurate reporting, effective site management, and professional work standards are all facilitated by strong documentation abilities.

Time-Bound

- My work in networking, cabling, and smart device installations is directly supported by these abilities.
- They enhance my capacity to test, troubleshoot, and maintain dependable surveillance and network systems.
- Accurate reporting, effective site management, and professional work standards are all facilitated by strong documentation abilities.

Conclusion

My knowledge of networking tools and parts used in real-world installations, such as switches, PoE switches, smart cameras, and various cabling types, has improved because of this session. It raised my confidence in correctly identifying and handling equipment and enhanced my understanding of how these devices work together in a network environment. Even though the session was mainly introductory, more practice with network testing, device configuration, and documentation will help you perform better on subsequent tasks. All things considered, this session improved my technical expertise, preparedness for the workplace, and professional growth.

LEARNING LOG 3

For the Period 23rd September 2025 to 3rd November 2025

What have I done? (relate tasks to Learning Outcomes LO1, LO2, LO3, LO4, LO5 in your WRL form)

In this work session, I was present at the location of the client to set up his CCTV camera system. I have overcome several minor technical challenges such as cable management, power supply fault and compatibility problems. I also made sure that I took good measures in wiring and kept a clean and well-organized hardware environment. In general, I applied effective communication, troubleshooting skills, and technical skills, which are very detailed, to complete the installation successfully.

What I did well and why it went well(refer to skills used)

- I have applied the powerful communication skills in my interaction with the client to ensure that there are a smooth workflow and clear coordination of activities.
- I used good technical wiring skills, and this enabled me to install all the three cameras within the anticipated time.
- I was very sure about on-site technical problems, and all wiring and camera mounts were made work properly.
- The process of installation was coordinated well and successful through appropriate coordination with our team leader.

What I could improve on (i.e. skills I want to improve)

- I would like to improve time management because I would be able to work more productively in large-scale installations and system configuration.
- I would like to improve my developed skills in the camera composition, such as TV display settings and the integration of mobile apps.
- The first is that I will enhance my documentation and report-writing skills to come up with more precise and comprehensive installation summaries.

Action I can take to improve my skills and learning.

Specific

- I need to focus on learning advanced system settings and driver optimizations to enhance overall performance.
- I should practice creating well-structured installation reports after each task for better documentation and clarity
- I aim to improve my camera and wiring configuration skills to achieve faster and more accurate setups.

Measurable

- I will also view educational videos on the use of advanced camera settings to enhance my technical skills.
- I will also come out with a detailed installation report every time I visit the site in future to enhance the quality of documentation.

- I will also keep track and significantly decrease the time spent on installations, by 5-10 per cent, by means of better workflow planning and efficiency.

Achievable

- I will adopt free and cheap learning platforms to keep on enhancing my technical skills.
- I will use the new skills when performing the next installation assignments to increase the practice performance.
- I will have weekly practice sessions that will focus on camera settings and installation methods.

Relevant

- These competencies will make a direct contribution to my roles in the IT sector and generally improve my performance.
- They will enhance my knowledge on configuration and make me more efficient in troubleshooting technical problems related to camera.
- The skills will enhance my documentation skills and help me enhance professional communication and reporting.

Time-Bound

- The lessons in configuration videotapes will be done in the next several weeks.
- I will begin the use of a better documentation standard with the next installation.
- To maintain a consistent and steady improvement, I will assess my progress on a weekly basis.

Conclusion

This work experience strengthened my technical installation skills and enhanced my communication with both customers and my team leader. I successfully managed on-site challenges and ensured that all cameras were functioning properly. While my overall performance was strong, improving my time management, advanced configuration abilities, and documentation skills will support further growth. Overall, this session has positively contributed to my professional development and increased my confidence in handling larger and more complex technical tasks.

LEARNING LOG 4

For the Period 4th November 2025 to 14th November 2025

What have I done? (relate tasks to Learning Outcomes LO1, LO2, LO3, LO4, LO5 in your WRL form)

My team leader and I connected the CCTV cameras, finished the wiring setup, and set up the system to show footage on the TV and on mobile devices via the Hik-Connect app during this work session. All the equipment on the premises, such as routers, printers, PCs, phones, and cameras, was also recorded. I also gained hands-on experience with device integration and setup by installing a smart home camera and learning how to configure it. I used my strong technical, problem-solving, and communication skills to complete the work efficiently and professionally.

What I did well and why it went well (refer to skills used)

- I provided updates and reporting materials while maintaining clear communication with the team and supervisor.
- I tested the PCs' and the Ethernet switch's network connectivity accurately.
- I quickly learned the features and setup procedure of the smart home camera and installed and configured it effectively.
- •To guarantee accurate tracking and clarity, I kept well-organized records of every material used on-site.

What I could improve on (i.e. skills I want to improve)

- To manage several tasks more effectively in a single day, I intend to improve my time management abilities.
- I want to learn more about smart device integration and sophisticated camera settings.
- I want to make my documentation, including material lists and network diagrams, more accurate and clearer.
- I want to improve the speed at which I troubleshoot, particularly when testing network devices and verifying connectivity.

Action I can take to improve my skills and learning.

Specific

- I should focus on learning sophisticated camera and smart device configuration methods.
- After each task, I need to get better at creating organized material usage reports.
- need to improve my troubleshooting and network testing skills.

Measurable

- I'll improve on configuring IoT devices or smart homes.
- For each upcoming installation, I will create a thorough materials and connectivity report.
- I'll keep an eye on my troubleshooting procedure and try to cut down on network diagnostic time by ten percent.

Achievable

- I'll improve my IoT and configuration skills using free or inexpensive learning resources.
- I'll immediately put the knowledge I learn to use in future on-site assignments.
- I'll plan weekly practice sessions with an emphasis on device configuration and network testing.

Relevant

- These are some of the skills that I will need in my network and installation of the device.
- They will enhance my troubleshooting skills and assist in making sure the systems are stable and reliable when deploying them.
- The quality of my reports will be improved as well as the quality of my site management practices because of the increase in documentation skills.

Time-Bound

- In several weeks, I will be able to learn the necessary configuration skills.
- I will start adopting improved documentation habits starting with the subsequent work session.
- I will also measure my progress every week to see that there are continuous advancements in my skills.

Conclusion

The experience I got in the course of the work experience helped me with my practical networking skills, especially when it came to testing connectivity and handling types of network equipment. It also helped me be more confident with my reporting of materials and learning new configuration procedures, including the process of setting up a smart home camera. Though the work was done successfully, it will be possible to develop my documentation, troubleshooting, and device integration skills to be even more useful in the future installations. Overall, this session helped improve my professional growth and enhance my technical skills..

LEARNING LOG 5

For the Period 15th November 2025 to 25th November 2025

What have I done? (relate tasks to Learning Outcomes LO1, LO2, LO3, LO4, LO5 in your WRL form)

In this working period, I was introduced to the basics of establishing a Hikvision attendance system, using tutorial instructions and completed a report on what was done. Field work on-site was also to install an AHD camera that I set up and installed. I employed powerful communicative, problem-solving, and technical skills to complete the installation process effectively during the task.

What I did well and why it went well (refer to skills used)

- My communication skills facilitated easy installation of AHD cameras and also assisted me to coordinate the activities.
- I applied good technical skills; thus, I was able to accomplish the installation of all AHD cameras within the scheduled time.
- I also dealt with technical problems on the ground comfortably, and all cameras were operating properly.
- Good teamwork and leadership were a contribution made by the leader, which helped in the installation process being well planned and successful.

What I could improve on (i.e. skills I want to improve)

- I desire to have greater time-management skills, which will enable me to work more effectively when it comes to larger installation projects.
- I should also improve my configuration skills to accomplish tasks faster and better.
- I will also strive to enhance my documentation and report-writing skills to describe the work done and the processes learnt in a clear manner.

Action I can take to improve my skills and learning.

Specific

- I need to focus on learning advanced BIOS settings and driver optimizations.
- I need to practice creating structured installation reports after each task.
- I need to improve my network configuration skills for faster and more accurate setup.

Measurable

- I will complete at least one online course on advanced PC configuration.
- I will produce a detailed installation report for each future site visit.
- I will track and reduce the installation time by 5-10% through better workflow planning.

Achievable

- I will use free and affordable learning platforms for technical upskilling.
- I will apply new skills directly during the upcoming installation tasks.
- I will set weekly practice sessions to review BIOS, drivers, and network settings.

Relevant

- These skills will directly support my IT field responsibilities.
- It will improve my configuration knowledge and enhance troubleshooting efficiency.
- These skills will strengthen my documentation, support in professional communication and reporting standards.

Time-Bound

- I will complete the online course within the next 3 weeks.
- I will begin applying improved documentation standards starting from the next installation.
- I will review the progress weekly to ensure consistent improvement.

Conclusion

This work experience strengthened my technical installation abilities and improved my communication with both customers and team members. I have successfully managed on-site challenges and ensured all PCs were functioning properly. Although I have performed well, focusing on time management, advanced configuration, and documentation will help me grow further. Overall, this session contributed positively to my professional development and confidence in handling large-scale technical tasks.

LEARNING LOG 6

For the Period 26th November 2025 to 6th December 2025

What have I done? (relate tasks to Learning Outcomes LO1, LO2, LO3, LO4, LO5 in your WRL form)

In this work session, I interacted with various customers from different branches of Aasha Laghubitta through phone calls and tried to resolve their problems associated with their camera systems. In this interaction, I discussed various issues and problems that customers were facing with respect to their camera system and tried to resolve various system complexities.

What I did well and why it went well (refer to skills used)

- Effective communication skills enabled me to grasp the customer's problems as I spoke with them over the telephone as well as accurately document the problems.
- I used my knowledge of this to resolve general problems with camera systems quickly.
- I made sure to correctly document the issues faced by customers and then report the same to my supervisor.
- Effective coordination with my supervisor facilitated timely decision-making and improved customer support outcomes.

What I could improve on (i.e. skills I want to improve)

- I seek to enhance my time management skills to juggle multiple customer calls.
- I need to enhance my troubleshooting skills in terms of camera systems so that issues are handled more quickly and precisely.
- I should develop skills in better documentation and report writing to summarize customer issues clearly and specifically.

Action I can take to improve my skills and learning.

Specific

- I will have to concentrate on acquiring more knowledge on how to use the settings on more advanced cameras and on how to remotely diagnose issues.
- To better utilize this function, it is important that I become proficient in crafting customer issue and resolution reports after each support activity.
- In the same manner, the extent to which the network's connectivity to camera systems should be understood for the accomplishment of swift and accurate fault resolutions also requires improvement by me.

Measurable

- I shall ensure completion of at least one online learning module related to camera systems, networking, or troubleshooting.
- I shall create a definite customer issue and resolution report subsequent to each support session.
- My response and resolution time will be continually measured and improved upon with a goal of diminishing my issue handling time between 5-10%.

Achievable

- I also intend to utilize available online resources that offer information on camera systems, networking, and troubleshooting.
- I will be able to apply the new skills I've just learned directly in my current duties of answering customer support calls and dealing with camera-related issues.
- I shall establish a weekly schedule to study common camera issues, network settings, and other system settings.

Relevant

- These skills align with my core duties in an IT support role and in maintaining camera systems.
- It also improves my technical skills and makes it more efficient to diagnose and solve system problems.
- These skills enhance my documentation skills in a professional form of communication.

Time-Bound

- I will complete the online module I choose, one that focuses on camera systems or information technology support, within the next three weeks.
- I will start incorporating enhanced documentation and reporting practices with the next support task.
- I will assess my development on a weekly basis to ensure constant development in my skills.

Conclusion

This work experience strengthened my technical troubleshooting skills and improved my communication with customers and my supervisor. I successfully identified and resolved several camera system issues through phone support and ensured that problems were clearly documented and reported. Although the tasks were completed effectively, focusing on faster issue resolution, deeper system knowledge, and clearer documentation will help me improve further. Overall, this session contributed positively to my professional development and increased my confidence in handling real-world IT support tasks.

LEARNING LOG 7

For the Period 6th December 2025 to 16th December 2025

What have I done? (relate tasks to Learning Outcomes LO1, LO2, LO3, LO4, LO5 in your WRL form)

During this work session I communicate with the customer of all branches of Aasha Laghubitta and them to reset their username and password who don't know their login credentials. I also provide the presentation the customers through zoom app to counter their different issues.

What I did well and why it went well(refer to skills used)

- I communicated clearly with the supervisor and team while reporting materials and updates.
- I have performed accurate network connectivity testing between PCs and the Ethernet switch.
- I have installed and configured the smart home camera efficiently, learning its features quickly.
- I have maintained the organized documentation of all materials used on-site for proper tracking.

What I could improve on (i.e. skills I want to improve)

- I want to improve my time management when handling multiple tasks in a single workday.
- I need to strengthen my knowledge of advanced camera configuration and smart device integration.
- I need to enhance documentation clarity for listing materials and network mappings.
- I need to improve my troubleshooting speed for network device testing and connectivity checks.

Action I can take to improve my skills and learning.

Specific

- I need to be comfortable with the more sophisticated aspects of user account management and security for system access.
- Practice making structured reports on customer interaction and resolution to issues following each interaction.
- As a requirement, I need to develop my distance-based troubleshooting capability, which includes problem diagnosis.

Measurable

- At least one online learning module on user account management, system security, and/or remote IT support will be completed.

- I will provide a specific and well-detailed support report for each customer, as well as address issues involving reset credentials.

- I will monitor my issue resolution times with remote support customers and seek to reduce my troubleshooting times by about 10%.

Achievable

- I plan to make use of free and/or affordable sources of online learning to broaden and deepen my understanding of IT support services, access to computer systems, and other forms of remote system troubleshooting.

- I shall use these skills I learned to help customers with resetting login credentials or other issues regarding the system.

- Weekly practice sessions will be scheduled to discuss general support situations, methods of providing remote assistance, and general concepts of computer networks.

Relevant

- These skills directly enable my responsibilities in IT support, system access management, and providing customers with IT-related information.

- They facilitate more efficient troubleshooting and help sustain well-functioning system access.

- Well-written documentation plays an important part in professional reporting, good issue tracking, and quality support services.

Time-Bound

- I intend to complete a chosen online learning activity on IT support or system access management within the next three weeks.
- Improved standards of documentation/reporting will be adopted from the next working session onwards.
- I will evaluate my own performance on a weekly basis to continually improve skills and service quality.

Conclusion

This work experience improved my ability to communicate effectively with customers and provide remote technical support. It strengthened my confidence in handling user account issues, such as resetting usernames and passwords, and in resolving system-related problems through online platforms like Zoom. Although the tasks were completed successfully, further improvement in documentation, troubleshooting efficiency, and user-support skills will help me perform even better in future support sessions. Overall, this session contributed positively to my professional growth and confidence in delivering IT support services.

LEARNING LOG 8

For the Period 17th December 2025 to 27thDecember 2025

What have I done? (relate tasks to Learning Outcomes LO1, LO2, LO3, LO4, LO5 in your WRL form)

In this working period, I helped the technician to install and install CCTV cameras at the Agricultural Development Bank. I was also engaging in the installation of a camera and heard out the full configuration process which made me have the hands-on experience of integrating devices and setting up a system. During the task, I used effective communication, problem-solving and technical skills to make the work work efficient and professional.

What I did well and why it went well (refer to skills used)

- The supervisor and team also easily understood me and received proper reporting as I made sure to update them on my progress and report accurately on the materials, thus they had a smooth flowing work schedule with no misunderstandings.
- I also performed accurate network connectivity tests between camera and Ethernet switch using my technical knowledge of networking principles which led to good and stable connection.
- I was able to learn and apply well on technical learning and problem-solving skills because I learned and installed the camera within a short time frame and managed to set up the camera without complications.

What I could improve on (i.e. skills I want to improve)

- I aim to improve my time management skills when handling multiple technical tasks within a single workday to increase overall efficiency and productivity.
- To be able to work on more complex systems setups, I will enhance my expertise in more sophisticated camera setup and smart devices integration.
- I must improve the proficiency and precision in my records especially in documentation on materials.

Action I can take to improve my skills and learning.

Specific

- I need to focus on learning advanced smart device and camera configuration to handle complex installations more independently.
- I need to practice creating clear and well-structured material usage reports after each task to improve documentation accuracy and traceability.
- I need to strengthen my network testing and troubleshooting skills to diagnose and resolve connectivity issues more efficiently.

Measurable

- I will complete at least one certified online course focused on camera or device configuration to measure improvement in advanced setup skills.
- I will prepare a detailed materials usage and network connectivity report for each future installation to ensure consistent and accurate documentation.

- I will monitor my network troubleshooting duration and aim to reduce the average time management to evaluate improvement in technical efficiency

Achievable

- I will use free or affordable online learning platforms to enhance my knowledge of IoT devices and networking concepts.
- I will apply newly acquired skills directly during upcoming on-site technical tasks to reinforce practical understanding.
- I will schedule weekly practice sessions focused on network testing and device configuration to steadily improve my technical proficiency.

Relevant

- These skills directly support my responsibilities in networking and device installation.
- It will improve troubleshooting and enhance overall system reliability during deployments.
- Strong communication with my technician provides and site-management standards.

Time-Bound

- I will complete the online course in a weeks.
- I will start applying improved documentation standards from the next work session.
- I will review my progress weekly to ensure consistent skill improvement.

Conclusion

This field experience has improved my practical networking and technical expertise especially in installing and setting up of CCTV systems. Helping the technician and being actively involved to help in the camera setup gave me priceless hands-on experience in integrating devices and rolling out a system. During the work, I used effective communication, problem-solving, and technical skills, which guaranteed the efficient and professional performance of the work. Although the installation was positive, additional refinement of documentation, troubleshooting and more advanced configuration of the device can enable me to be even more efficient when carried out in a technical task in future. On balance, this session had a great impact on my professional growth, practice competency, and self-confidence in addressing the real-life networking and IT support tasks.
