

Module Code & Module Title
CS6W50NI Career Development Learning

Assessment Type
Individual Learning Portfolio with Evidence
Semester
2025 Autumn

Student Name: Tapendra Singh
London Met ID: 23056247
College ID: NP01nt4s240057
Assignment Due Date: 1/28/2026
Assignment Submission Date: 1/28/2026
Submitted To: Bibek Baral
Word Count (Where Required):5500

I confirm that I understand my coursework must be submitted online via My Second Teacher under the relevant module submission portal before the deadline for my assignment to be accepted and marked. I am fully aware that late submissions will be treated as non-submission and a mark of zero will be awarded.

1.Introduction

1.1 Background to the Company

Due to interest and module in networking, IT systems, and technical support, I chose to have my internship in the company called Bhusal Tech Traders and Suppliers, which is a company that supply technical equipment and network-related solutions. This internship was primarily aimed at acquiring practical exposure and realizing how networking and IT support work is done in the real working settings. During my internship, I served as a Networking and IT Support Intern which exposed me to providing support to the technicians in system setups and configuration processes. I was engaged in the on-site network infrastructure and equipment checks, also helped with installations and helped to find out and address technical problems. Moreover, I was involved in remote IT services, where I used to chat and talk to clients via telephone and help them configure their systems and help them debug different technical issues. The internship had a significant value of enhancing my technical, communication, and confidence skills in performing real-world networking activities. It also provided me with sufficient experience on professional working practices and systems of client support. Overall, the experience has made a substantial contribution to both my academic and professional development as I was able to practice my theoretical knowledge in the field.

1.2 Structure and role of company

Bhusal Tech Traders and Suppliers is a technical trade and service-based company that aims at offering solutions to its clients regarding electronic solutions, networking and security services. The company is organized into several functional units that have the role of facilitating the smooth running of the organization, provision of technical services and customer satisfaction. The company is primarily divided into Sales and Procurement, Technical and Installation Support, Customer Service and Administration and Management departments. All the departments are significant to provide effective coordination among the supply of products, technical configuration, and after-sales services. Each section is manned by skilled personnel making the company to be responsive to the needs of the clients. Technical Support and Installation team is the one that performs the configuration, installation, and maintenance of the networking

equipment and security systems, along with troubleshooting of the technical problems at the same location and remotely. The Sales and Procurement department deals with sourcing of products, coordination of suppliers and communication with the clients with respect to equipment demand. In the meantime, Customer Support team helps their clients by fixing their system issues by phone calls and technical support. Administration and Management department deals with daily operations and planning, as well as coordination of the workflow and quality of the services. The core business of Bhusal Tech Traders and Suppliers is to assist clients in the adoption of the reliable technological solutions through the provision of quality equipment, technical solutions and supportive services. The company is involved in enhancing the efficiency and reliability of the performance of the systems in its customers by integrating the supply of its products with practical technical services.

Organizational chart

Bhusal Tech Trader Pvt. Ltd Organizational Chart

Figure 1: Organizational chart

1.3 Specific Department Worked In

My internship experience in Bhusal Tech Traders and Suppliers was mainly under Technical Support and Networking Department. This department would oversee installation, configuration, maintenance and troubleshooting of networking equipment and electronic systems that have been sold to clients. It is a significant contributor to the provision of technical services in an efficient way and a stable functioning of client systems. The Technical Support and Networking Department specializes in helping customers in configuring their systems, network connection, and system functionality. The team takes care of on-site and remote support and thus makes sure that the devices are well installed and configured based on the needs of the customers. I was also assisting technicians in the work of setting systems, monitoring the states of networks and equipment, and helping to eliminate typical technical and connectivity problems as an intern. Besides physical work, IT support is also offered by the department over the telephone. I served clients with the support of taking them through configuration processes, troubleshooting of the basic system failures, and providing solutions to their problems. This department equally works together with the sales team to make sure that before installation and deployment; the technical requirements have been well comprehended. The experience in this department enabled me to have a hands-on understanding of the operations in the networking field, dealing with customers, and real-time problem-solving. The exposure enabled me to build a practical skills base regarding the provision of technical support services in actual organizational contexts and enhanced my networking, system configuration, and IT support practices.

2. Academic Context

The academic module knowledge and skills were also significant to assist me in my internship activities at Bhusal Tech Traders and Suppliers. The modules were very theoretical and enabled me to acquire knowledge on networking, system security, and professional practices. The transfer of the classroom learning into real work situations helped me to better perform the technical activities and made me feel more confident when I was working on the technical issue in the real world during the internship.

Module 1: Computer Networks and Networking Fundamentals

This module offered a good base insight into the fundamentals of networking like IP addresses, network topologies, routing, switching, and basic troubleshooting of networks. The information that I acquired in this module was directly utilized in my internship as I worked with technicians to help solve network setups, troubleshooting network connections and evaluating network performance in the field. Knowledge of these networking essentials allowed me to detect typical networking errors and assist the clients in configuring and setting up the systems.

Module 2: Professional Issues, Ethics, and Computer Law

This module has made me realize the significance of professionalism, responsibility and legal issues in the IT world. This was put into practice during my internship not only in the processing of client information but also in the service delivery of technical support and professional communication with the customer. It was also able to aid me in adhering to organizational policies as well as proper utilization of technology when aiding clients in remote and on-site technical support.

Module 3: Risk, Crisis and Security Management.

The Risk, Crisis, and Security Management module was an eye-opener on the process of determining the technical risks, system vulnerability, and possible operational breakdowns. The knowledge was able to make me identify some of the common risks associated with networking equipment, system misconfiguration and equipment failure. In my internship, I used this knowledge in my work as I was able to help address troubleshooting problems and support technicians to minimize system downtime and increase service reliability. My capacity to respond effectively and calmly towards technical issues in the real working conditions was also developed with the help of the module.

3.Review of Activities

3.1 WRL Form

you are doing at the university.

Learning Outcome ID	Learning outcomes By the end of my work placement, I will be able to develop what skills or knowledge: (e. g. develop my XXX skills, enhance my knowledge of XXX)	Activities and tasks I will achieve this learning outcome by carrying out what tasks (e. g. participating in a Web development project, or to work in a team, or to engage in group discussion)	Evidence Evidence I could use to demonstrate that I have achieved this learning outcome? (e. g. feedback from the employer, artefacts I will develop, screen shots or video capture, meeting minutes)
LO1	I aim to strengthen my communication abilities across both technical and non-technical settings. Additionally, I plan to improve my presentation skills by clearly conveying technical concepts, project progress, and updates to my team and academic supervisor.	I will accomplish this learning outcome by describing support processes through phone conversations, messaging platforms, and face-to-face interactions. I will also create and present brief updates covering assigned responsibilities, issue resolution approaches, and troubleshooting techniques during team or supervisory meetings. Furthermore, I will refine my skills by gathering and applying constructive feedback from participants and my academic supervisor.	Communication logs, supervisor feedback, positive clients feedback, meeting minutes, presentation slides
LO2	I aim to enhance my ability to collaborate and contribute as a productive member of an IT team, improving my teamwork skills by engaging in shared responsibilities, coordinated problem-solving, and cooperative technical tasks.	I will accomplish this learning outcome by actively engaging with the IT team throughout system deployment, technical support activities, and collaborative discussions in team meetings.	Peer evaluations, meeting minutes, group task reports.
LO3	I aim to develop stronger analytical and troubleshooting	I will meet this learning outcome by conducting systematic	Troubleshooting reports, learning logs,

	abilities by recognizing technical challenges and applying effective solutions to resolve them.	analysis of technical faults, determining their root causes, and implementing appropriate corrective measures to resolve them effectively.	solution report, before/ after, supervisor notes.
LO4	I aim to improve my ability to organize and allocate time efficiently by managing multiple IT support responsibilities, determining task priority, and ensuring timely completion within required deadlines.	I will achieve this learning outcome by Daily Task Planning and Prioritization, Handling Multiple IT Support Requests, Setting Personal and Team-Based Deadlines, Progress Tracking and Self-Evaluation: Application	Task completion records, individual planning documents, scheduling outlines, summaries of project progress or support incidents, incident reports, and chronological activity breakdown
LO5	I aim to develop greater flexibility and adaptability by gaining proficiency in newly introduced tools and technologies and aligning my work approach with evolving organizational requirements.	I will accomplish this learning outcome by discovering and evaluating new technologies, expanding my knowledge through independent learning, and exchanging insights with my team. I will further reinforce this outcome by applying practical experimentation, system testing, and continuous skill development through real-world practice.	Training Records or Certificates, Screenshots or Recordings of Tool Usage, Change Logs or Update Reports
LO6	I will be able to develop my individual learning and adaptability skills through certifications, self-study, portfolio building, and writing tutorials.	I will achieve this learning outcome by watching the technical issues from YouTube videos and other learning platforms and consult with supervisor.	Research articles feedback from supervisor practical task or log.
LO7	I will be able to make my ability to manage the security of camera in password managing and reset and help	I will achieve this learning outcomes by consulting with technician learn from various learning resources	Security management for client screen shots change records and review from technician.

	the clients in security of camera.		
LO8	I will be able to develop my ability of configuring the camera and pc , server , switch setup for different organizations.	I will be achieving this learning outcome by perform this task onsite and consulting it from my technician.	Configured photos on sited of cameras reports, validation from technician.
LO9	I will be able to learn practical skills in clamping, and cable management for structured networking	I will achieve this learning outcome by performing RJ-45 cable punching crimping connectors and organizing network.	Photos of completed task and logs.
LO10	I will be able to strengthen my hardware and software troubleshooting skills on pc cameras and peripheral devices.	I will achieve this learning outcome by diagnosing faults and change them and get the solution to tackle that problem.	Maintenance logs, screenshots of resolved issues before /after repair documentation, supervisor confirmation.

Figure 2:WRL Form

3.1LO1: I aim to strengthen my communication abilities across both technical and non-technical settings.

During my work placement, I enhanced my communication skills both technically and non-technically. I frequently made phone calls, used messaging services, and face-to-face communications with the team members, supervisors, and users. These contacts made me explain the processes of support and technical matters in a clear and professional manner. I was taught to change my style of communication based on the technical knowledge of the audience. To the non-technical users, I made technical concepts more straightforward. In the case of technical employees, I applied the right words to talk about system problems and troubleshooting techniques. My presentation skills also have been enhanced as I was able to provide short updates in team and supervisory meetings. These updates encompassed allocated tasks, project development, and problem-solving action plan. The frequent presentation training taught me to be more confident and understandable. I paid attention to logical structuring of information and its conciseness. I was also able to hear questions and answer them accordingly during the discussions. Supervisor comments enabled me to polish my style of communication. I used such feedback to become clearer and more professional. This experience helped to work with the team more efficiently. In general, I gained effective communication and presentation skills throughout my placement.

[Evidence 8.5.1 Log 1](#)**3.2 LO2 I aim to enhance my ability to collaborate and contribute as a productive member of an IT team.**

During my work placement, I managed to develop a greater skill in working as a productive member of an IT team. I was also involved in collective responsibility when deploying systems and undertaking technical support assignments. Collaborating with other team members helped me become more aware of teamwork in solving problems. I also helped to solve technical problems by means of mutual consultations and mutual troubleshooting. Team meetings helped in enhancing my communication and team-working abilities. I was taught how to appreciate different opinions and technical strategies in the team. I assisted colleagues when required so that the personnel could

maintain the efficiency of workflow. I was also responsible in terms of doing tasks given on time. Technical activities were enhanced through collaboration, which enhanced service delivery. I adjusted to the team working conditions. Team building skills were enhanced by constructive feedback of team members. I used this feedback to improve cooperation and coordination of the tasks. The experience made me more confident when working in teams in terms of IT work. My level of responsibility in the team increased. Generally, the placement helped me become stronger in terms of teamwork and collaboration.

[Evidence 8.5.2Log 2](#)

3.3 I aim to develop stronger analytical and troubleshooting the problem.

During my work placement, I acquired greater abilities in analytical and problem-solving skills. I consistently found technical problems in the process of system operation and support. I used a step-by step method of troubleshooting to identify technical defects. This entailed the examination of symptoms and the examination of system settings. I identified root causes by isolating bad components or bad configurations. Rational thinking assisted me in assessing the potential solutions. I took suitable corrective actions to address the problems that were observed. To ensure that faults have been resolved successfully, testing was undertaken. I have also prepared notes on troubleshooting and notes, which would be useful in the future. Teamwork helped in addressing complicated problems. Problem solving practices were developed because of supervisor guidance. Mentoring facilitated the process of refining my analytical style. I had enhanced my skills of working under technical pressure. This experience strengthened my confidence on how to deal with technical problems. All in all, I enhanced my analytical and troubleshooting skills during the placement.

[Evidence 8.5.3 Log 3](#)

3.4 I aim to improve my ability to organize and allocate time efficiently by managing multiple IT support responsibilities.

My time spent as a work placement provided me with effective organizational and time management skills as I had to handle several tasks related to IT support at the same time.

I started out the day by planning my tasks, which enabled me to arrange my activities in terms of urgent, complex activities as well as deadlines. This was the planning that made sure that high-priority technical issues were done in time without causing delays in other support tasks. I also used to attend to various IT support requests of various users and that demanded effective switching of tasks and concentration. Scheduling personal and team-related deadlines helped me to be responsible and see to it that the tasks were done within the time limits. The use of progress tracking tools, task lists, and digital monitoring tools enabled me to track progress in completion and recognize delays in time. The self-assessment was important in enhancing my performance since I checked the already written tasks to determine efficiency and accuracy. My schedule changed when my priorities shifted or when some unforeseen problems occurred to ensure the productivity. The response of supervisors also contributed to the improvement of my planning strategies. On balance, this experience contributed greatly to my time management skills, as well as my ability to sustain the quality of service.

[Evidence 8.5.4 Log 4](#)

3.5 I aim to develop greater flexibility and adaptability by gaining proficiency in newly introduced tools and technologies.

Flexibility and adaptability emerged during my work placement experience, as I was engaged in the active work on the newly introduced tools, new technologies, and new forms of organizational work. I also went out of my way and researched and tested these technologies as the organization was adopting newer systems and work processes to know how and why they were necessary. This was a proactive measure that made me adapt faster to technical changes and expectations in the workplace. I also broadened my knowledge base by conducting independent learning through reviewing of technical documentation, online materials and internal instructions. Moreover, I also shared my knowledge and experience with the team members frequently, and this facilitated group learning and enhanced my practical skills in learning new tools. Real-world application the real-world application scenarios were also attained through practical experimentation and system testing, where I was able to identify limitations and gain practical experience. My work approach was in line with shifting organizational needs by using these tools in

my day-to-day activities. The real-life practice enhanced my confidence and technical competence. Supervisor feedback also helped me to develop. All in all, this experience improved my ability to adapt, my problem-solving attitude, and my willingness to study in the dynamic IT settings.

[Evidence 8.5.5 Log 5](#)

3.6 I will be able to develop my individual learning and adaptability skills

My personal learning and adaptability skills were created by undertaking self-improvement exercises as I worked in a work placement. My knowledge was also improved through self-study through online learning websites like YouTube and other technical materials. Such websites enabled me to learn more about technical problems, tools as well as trouble shooting methods. I also had frequent meetings with my supervisor to discuss difficult issues and acquire some practice. I received feedback, which assisted me in directing my learning and enhancing comprehension with the help of my supervisor. In my case, I also worked on my professional portfolio, including writing about the tasks, solutions, and technical experiences. Composing brief tutorials and notes enhanced my learning and better understanding. My skills were also developed with the aid of certifications and organized learning materials. This self-directed learning helped me to be more flexible and self-confident in dealing with emerging technical issues. All in all, the placement enhanced my skills of learning on my own and using knowledge practically in practice in IT-based world.

[Evidence 8.5.6 Log6](#)

3.7 I will be able to make my ability to manage the security of camera

My work placement has trained my skills in controlling camera security especially password management and reset. I also helped to ensure access to camera systems is secure since I adhered to the authentication and security rules. I was taught how to reset passwords in a safe manner without losing user information and system integrity. I was able to get practical experience of secure camera setting and access control by consulting with the experienced technicians. I also referred to different learning materials to learn best practices in managing camera security. These materials allowed me to realize the

need of effective passwords and safe storage steps. The practical experience has made me more confident about my ability to help users with security problems with their cameras. It was guided by the supervisors to ensure that security tasks were done properly and in a responsible way. Overall, this experience helped me to gain better knowledge about camera security management and to improve my skills in supporting the work of the secure system.

[Evidence 8.5.7 Log 7](#)

3.8 I will be able to develop my ability of configuring the camera and pc , server , switch setup setup for different organizations.

I also gained good technical capacity in setting up cameras, PCs, servers and network switches to various organizations during my work placement. I was also greatly involved in onsite installation and setup tasks thus offered me practical experience on IT environment in real world. This involved hardware assembly, connection of the network devices, IP addresses and proper connection of the systems. Through collaboration with other experienced technicians, I got to understand the procedures that are considered as standard configuration, security and the best practices that must be adopted to fit different organizational setups. The technician advice made me realize the difference in requirements based on different organizational sizes, network design, and operational requirements. I also had an experience in the troubleshooting of configuration problem during installation. System testing and verification was done to ensure that everything was working as expected. This practice led to my enhancement in confidence in the field and technical precision as well as being able to work on my own and be supervised. All in all, the placement enabled me to establish an ability of configuring and deploying IT systems in workplaces.

[Evidence 8.5.8 Log 8](#)

3.9 I will be able to learn practical skills in clamping, and cable management for structured networking

During my work placement, I was able to acquire various skills in clamping, cables, and structured networking. For instance, I was able to acquire hands-on knowledge and

understanding of how to organize and clamp network cables to enhance safety and efficiency. This involved planning and bundling cables appropriately and utilizing various clamping techniques to prevent tangling and damage.

I was able to punch RJ-45 cables and crimp connectors, which enabled me to create efficient and functional network cables. This provided me with extensive knowledge and understanding of various wiring techniques and the significance of signal integrity. In addition, I was able to acquire knowledge and understanding of how to label and organize cables appropriately to enhance network efficiency.

During my work placement, I was able to acquire various skills and knowledge in structured networking and cables through direct supervision and guidance from various technicians. This enabled me to apply my knowledge and understanding of network cables and efficiency to enhance my confidence and precision. This experience enabled me to become efficient in network management and installation while adhering to professional standards.

[Evidence 8.5.9 Log 9](#)

3.10 I will be able to strengthen my hardware and software troubleshooting skills.

During my work placement, I focused more on improving my hardware and software troubleshooting skills, especially for PC cameras and peripherals. Generally, the major responsibilities of the work placement required me to identify faults, fix, or replace the faulty devices, and implement the solutions for solving the problems. I learned how to identify the causes of both hardware and software problems and implement the appropriate solutions. By actively working on these responsibilities, I gained experience in dealing with various types of device faults and learned better problem-solving techniques. I also gained more confidence in testing and evaluating the devices to ascertain whether they were working properly. These activities also helped me learn how to work methodically and effectively under time pressure. I also learned how to anticipate possible future problems. I gained experience working with various types of peripherals, which helped me gain more technical knowledge and flexibility. I also learned how to

document faults and their corresponding solutions. This experience helped me apply the theoretical knowledge of IT in practical situations. I was able to gain an understanding of the interactions between hardware and software elements and their impact on the performance of devices. At the end of my placement, I feel that my understanding of troubleshooting has been greatly improved. I feel that I am better equipped to deal with technical issues in PC systems and peripherals.

[Evidence 8.5.10 Log 10](#)

4.Abilities Evaluation

4.1 By the end of my work placement, I will be able to develop my project management and time management skills.

As I was doing my internship in Bhusal Tech Traders Pvt. Ltd., The high level of project management and time management skills have been achieved due to managing several technical tasks at a time. My on-site camera installations, remote customer support, documentation, and system configuration were all on-site and therefore needed proper planning. I also was taught to organize tasks according to the urgency, technical complexity and needs of the customers. The everyday task planning allowed me to set enough time to do installations, troubleshooting and report. I also liaised with technicians to have tasks done on time. Supervisory sessions ensured that I monitored my progress and made amends when necessary. The fact that I had to handle several calls with customers also helped me to work during a time crunch. Supervisor feedback helped me to understand how to be more effective with my scheduling techniques. In the long run, I became more effective in workload balancing. The experience helped me to handle the roles of a professional IT workplace.

4.2 By the end of my work placement, I will be able to develop my independent learning skills.

During the placement, I enhanced my independent learning capabilities by actively learning technical information. I went through the manuals of cameras, networking books and tutorials on internet to learn about system configurations. In cases where I encountered some unknown technical problems, I would initially seek the solution on my

own. This strategy lessened the reliance on the human supervision. The self-study taught me new tools, cameras models, and problem-solving techniques. Independent learning made me accomplish tasks like camera set up and network testing among others with confidence. It also enhanced my flexibility towards new technologies. The level of my confidence was enhanced because I was able to practice concepts learned in real-life. This experience helped me to build on my skill of learning in a professional environment. The self-directed education was inseparable to my technical development.

4.3 By the end of my work placement, I will be able to develop my team collaboration and communication skills.

My internship greatly enhanced my teamwork and communication skills through continuous collaboration with technicians and supervisors. I actively participated in team discussions during installations and support tasks. Clear communication was required to coordinate installation steps and resolve issues efficiently. I regularly updated supervisors about task progress and challenges. I also communicated with customers through phone calls and online platforms such as Zoom. Explaining technical problems in simple language improved my communication ability. Feedback from team members helped refine my interpersonal skills. Working in a team environment taught me responsibility and cooperation. These experiences improved my ability to work professionally within group settings.

4.4 By the end of my work placement, I will be able to develop my critical thinking and problem-solving skills.

Critical thinking skills were developed when I was on the placement and performed diagnosis and solving of technical issues. I examined issues with camera connectivity, powering, network settings and errors of logging in. Rational thinking and logical reasoning were necessary in the identification of root causes. I considered various solution alternatives and then implemented remedial measures. Troubleshooting activities enhanced my decision-making capacity. I got to know how to evaluate risks and implement appropriate fixes. Supervisory comments were useful in clarifying my analytical skills. These experiences contributed to my efficiency in solving problems. I felt

more at ease taking on technical issues on my own. Critical thinking was incorporated into my technical process.

4.5 : By the end of my work placement, I will be able to develop my technical skills in networking, camera configuration, and system setup.

I also developed my technical skills in networking and surveillance systems which were enhanced during my internship. I also had practical experience with installation of CCTV cameras, PCs, and switches. I got to know how to test the network connectivity and provide stable system performance. My knowledge about networking was developed through practical exposure to the PoE switches. Cable management and RJ-45 crimping were also practiced. These activities reinforced my knowledge on organized networking. I used theoretical knowledge in practical installations. The mentorship of the supervisor contributed to my technical precision. My level of trust in setting up the systems went up with time. This practice enhanced my practical IT background.

4.6: By the end of my work placement, I will be able to develop my customer support and professional service skills.

In my placement, I gained a lot of skills on customer support as I was in constant contact with the client. I helped customers with their camera problems, password recovery and setup advice. Listening to problems of the customers enhanced accuracy of issues being resolved. I used step-by-step solutions with phone calls and zoom. Communication with customers was made through professional communication which built trust. I have become a patient and simplified person in terms of explaining technical issues. There was supervisor coordination that facilitated delivery of support. The experiences improved my service orientation mindset. I gained a greater confidence in dealing with customer requests. The customer support was the key strength of my internship.

4.7: By the end of my work placement, I will be able to develop my adaptability and flexibility in a professional IT environment.

My internship necessitated flexibility to new technical settings and assignments. Every location of installation posed different challenges and system requirements. I adapted easily to new cameras models and settings. On-site learning assisted in enhancing

flexibility. Continuous improvement was guided by feedback given by technicians. I had to change my methodology according to the organizational standards. The ability to be exposed to diverse tasks improved my learning rate. I got used to working in a dynamic environment. This flexibility enhanced my technical self-confidence. I needed to be flexible to support my professional growth.

4.8 By the end of my work placement, I will be able to develop my hardware and software troubleshooting skills.

I also gained good troubleshooting skills since I was able to diagnose hardware and software problems. I resolved issues related to cameras, PCs, and network peripherals. Having incorrect cables and misconfigurations were some of the things to be identified. I used procedural troubleshooting techniques to solve the problems. Curation of pre-and post-status enhanced accountability. The feedback of the supervisors improved my accuracy of troubleshooting. The practice enhanced my confidence. I acquired the skills of managing actual technical failures. Such competencies enhanced my IT support. Troubleshooting was one of my competencies.

5. Challenges

Challenges and issues are a vital aspect of professional development, since they are learning opportunities, and they contribute towards technical and personal development. When I was an intern at Bhusal Tech Traders Pvt. Ltd. as a Networking Intern, I have faced various issues that challenged my flexibility, ability to problem solve as well as my professionalism. Below some of the key challenges I had to deal with during this period are discussed.

• Time Management and Workload Balance.

Balancing between internship duties and College work was another major problem that I encountered during my internship as I had to work hard to ensure that I managed time well during those lessons. The internship was done on-site where I had to do installations, customer service calls, documentation, and learn new technical procedures that at times meant spending long hours working. Sometimes, the academic assignments interfered with the internship work so that it was hard to schedule everything properly. In the

beginning, this caused stress and impacted my performance in terms of the efficiency of doing tasks. To counter this difficulty, I have come up with an organized routine of tasks I do daily putting importance and urgency in the forefront. I set aside certain time periods in which I was to do my internship activities and College work, and this allowed me to be more organized and achieve deadlines more efficiently. My supervisor was also very helpful in providing guidance and flexibility that enabled me to cope with the pressure of work. This experience enabled me to understand the value of time management to ensure productivity, reduce stress, and improve work results.

• **Technical Troubleshooting and Practical Problem-Solving.**

The other significant difficulty I had encountered during my internship was that of addressing real life technical problems unlike theoretical learning. There was also the need to make practical choices and fast thinking to troubleshoot issues associated with CCTV cameras, network connectivity, power issues and device configuration. In others, issues arose unanticipated during installations or even in customer service calls, that needed to be resolved instantly, yet with a professional disposition. To cope with this issue, I had recourse to systematic troubleshooting techniques such as problem root cause identification, testing settings and supervisor consultations as required. As time went by, the frequent experience of technical problems made me more confident and capable of overcoming the issues on my own. This experience helped to reinforce my analytical competencies, as well as to learn how theoretical concept can be used in real-life situations. If the company has a client and is not technical, communication with the client will be required, as well as communication with non-technical users. Communication with Clients and Non-Technical Users. If the company is not technical and has a client, communication with the client will be required, and so will non-technical users. Another problem that I faced on the internship was in communicating technical information to clients with limited technical knowledge. Customers tended to be unable to articulate problems and struggled to comprehend technical descriptions of camera systems and network arrangements. This occasionally resulted in misunderstanding or stalling of problems. To overcome this obstacle, I was taught to make complex technical descriptions simple and step-by-step instructions easy and understandable. The

interaction and clarity were enhanced using phone calls and the internet like Zoom. I gained confidence in the way I dealt with customer questions and assistance in technical matters with a practice. This experience helped me to develop my skills in communication and become a better professional collaborator with different users.

- **Advancing to the New Tools and Technologies.**

The internship setting made me be fast to grasp the new models of cameras, networking devices, and systems configuration. First, it was not easy to know various device interfaces and working procedures, particularly when there was a combination of many technologies at the same time. Different installations sites had their own peculiarities, and they had to be flexible and learn fast. To cope with this dilemma, I also resorted to doing independent studies through looking at manuals, online tutorials and instructions of technicians. Real-life experience and practice made me familiar with new tools and technologies. The task helped me realize that flexibility and constant education are the keys to the success in the IT sector that is crucial to further professional development.

6. Conclusion

To sum up, the experience of the work placement was a great and significant experience in my academic and professional life. It gave me the possibility to implement a theoretical knowledge into the concrete workplace scenarios to enable me to gain the practical experience in IT systems, networking, and cybersecurity practices, and technical support. The experience has helped fill the gap between theoretical knowledge and practice, which has helped me to gain a better insight into the professional working environment. During the placement, I have gained an extensive array of technical and transferable skills, such as communication, teamwork, time management, problem-solving, adaptability, and independent learning. I became confident in my ability to work on the professional duties and to collaborate in a team being actively involved in the configuration of the system, the support of its networking, managing the cameras and security system, troubleshooting, and customer care activities. The issues that I faced during the placement, like the workload, the need to learn new technologies, and the need to communicate with the non-technical users, contributed to the fact that my resilience, critical thinking, and professional attitude were reinforced. These difficulties helped me overcome them with

the help of supervisors, and with the help of constant self-reflection, I managed to become a better performer. In general, the competencies, knowledge and practice that I have acquired throughout this placement have made me much more employable and prepared to work. The foundation of my future academic growth and career development has been firmly established by this experience and my desire to learn and grow further in the even more dynamic and technology-driven world.

7.Future plan

I would also like to continue working on the acquired knowledge and skills after this work placement to assist my future academic and professional objectives. In the short run, I will keep enhancing my technical skills in network, system configuration, camera security as well as IT troubleshooting through practicing and self-learning. I will also deepen my knowledge of the concepts of cybersecurity like risk assessment, vulnerability management, and secure system implementation by practicing them in real-life situations and academic projects. I hope to achieve pertinent professional qualifications in the medium-term concerning networking and cybersecurity to become more technically competent and employable. Such opportunities as internships, part-time work, or graduate opportunities in IT support or cybersecurity will help me to add to my experience and feel confident about working in the complex technical setting. My career goal in the long run is to establish professional career in cybersecurity and information security management. I would love to work in a position that concentrates on securing organizational systems, security risks, and adhering to the industry requirements and standards. I will also proceed to sharpen my communication skills, leadership skills, and problem-solving skills to assume more responsibilities in work-related professional IT settings. All in all, I am determined to be a lifelong learner and professional and keep up with technological changes and serve productively in secure, reliable, and resiliency digital systems in the future.

8.Appendix

8.1 CDL Form

London Metropolitan University
School of Computing and Digital Media

CS6W50 Career Development Learning (CDL) Form

Student
Student Londonmet ID:23056247
Student Name: Tapendra Singh
College E-mail ID: np01nt4s240057@islingtoncollege.edu.np
Mobile No: 9804645393
Student's work/placement address: Gatthaghar, Bhaktapur

Employer
Company Name: Bhusal Tech Traders private Limited
Company's Address: Gatthaghar, Bhaktapur
Company Supervisor's Name and Position: CEO
Company Supervisor's Tel No: 9801463145
Company Supervisor's email address: bhusaltechtraders@gmail.com

Career Development Learning Activity
Start Date: 3rd September 2025
End Date (if known):
Your role at the placement (position): Networking Intern
Brief description of your work at the placement: As a Networking Intern, I provided the technical support during configuration to the technician, conducting technical supporting to assess equipment and network conditions on-site, and supporting users with troubleshooting common problems. Also help client to as a it supports intern through call and help them in configuration.

Figure 3: CDL Form [Page 1]

Proposed learning outcomes from the Career Development Learning Activity:

It is very important that you read the learning agreement guide before filling in this form. You need to list **at least 7 learning** outcomes, and at least **two** learning activity should be closely relevant to the course you are doing at the university.

Learning Outcome ID	Learning outcomes By the end of my work placement, I will be able to develop what skills or knowledge: (e. g. develop my XXX skills, enhance my knowledge of XXX)	Activities and tasks I will achieve this learning outcome by carrying out what tasks (e. g. participating in a Web development project, or to work in a team, or to engage in group discussion)	Evidence Evidence I could use to demonstrate that I have achieved this learning outcome? (e. g. feedback from the employer, artefacts I will develop, screen shots or video capture, meeting minutes)
LO1	I aim to strengthen my communication abilities across both technical and non-technical settings. Additionally, I plan to improve my presentation skills by clearly conveying technical concepts, project progress, and updates to my team and academic supervisor.	I will accomplish this learning outcome by describing support processes through phone conversations, messaging platforms, and face-to-face interactions. I will also create and present brief updates covering assigned responsibilities, issue resolution approaches, and troubleshooting techniques during team or supervisory meetings. Furthermore, I will refine my skills by gathering and applying constructive feedback from participants and my academic supervisor.	Communication logs, supervisor feedback, positive clients feedback, meeting minutes, presentation slides
LO2	I aim to enhance my ability to collaborate and contribute as a productive member of an IT team, improving my teamwork skills by engaging in shared responsibilities, coordinated problem-solving, and cooperative technical tasks.	I will accomplish this learning outcome by actively engaging with the IT team throughout system deployment, technical support activities, and collaborative discussions in team meetings.	Peer evaluations, meeting minutes, group task reports.
LO3	I aim to develop stronger analytical and troubleshooting	I will meet this learning outcome by conducting systematic	Troubleshooting reports, learning logs,

Figure 4:CDL form [page:2]

	abilities by recognizing technical challenges and applying effective solutions to resolve them.	analysis of technical faults, determining their root causes, and implementing appropriate corrective measures to resolve them effectively.	solution report, before/ after, supervisor notes.
LO4	I aim to improve my ability to organize and allocate time efficiently by managing multiple IT support responsibilities, determining task priority, and ensuring timely completion within required deadlines.	I will achieve this learning outcome by Daily Task Planning and Prioritization, Handling Multiple IT Support Requests, Setting Personal and Team-Based Deadlines, Progress Tracking and Self-Evaluation: Application	Task completion records, individual planning documents, scheduling outlines, summaries of project progress or support incidents, incident reports, and chronological activity breakdown
LO5	I aim to develop greater flexibility and adaptability by gaining proficiency in newly introduced tools and technologies and aligning my work approach with evolving organizational requirements.	I will accomplish this learning outcome by discovering and evaluating new technologies, expanding my knowledge through independent learning, and exchanging insights with my team. I will further reinforce this outcome by applying practical experimentation, system testing, and continuous skill development through real-world practice.	Training Records or Certificates, Screenshots or Recordings of Tool Usage, Change Logs or Update Reports
LO6	I will be able to develop my individual learning and adaptability skills through certifications, self-study, portfolio building, and writing tutorials.	I will achieve this learning outcome by watching the technical issues from YouTube videos and other learning platforms and consult with supervisor.	Research articles feedback from supervisor practical task or log.
LO7	I will be able to make my ability to manage the security of camera in password managing and reset and help	I will achieve this learning outcomes by consulting with technician learn from various learning resources	Security management for client screen shots change records and review from technician.

Figure 5:CDL form [page 3]

London Metropolitan University

School of Computing and Digital Media

	the clients in security of camera.		
LO8	I will be able to develop my ability of configuring the camera and pc , server , switch setup setup for different organizations.	I will be achieving this learning outcome by perform this task onsite and consulting it from my technician.	Configured photos on sited of cameras reports, validation from technician.
LO9	I will be able to learn practical skills in clamping, and cable management for structured networking	I will achieve this learning outcome by performing RJ-45 cable punching crimping connectors and organizing network.	Photos of completed task and logs.
LO10	I will be able to strengthen my hardware and software troubleshooting skills on pc cameras and peripheral devices.	I will achieve this learning outcome by diagnosing faults and change them and get the solution to tackle that problem.	Maintenance logs, screenshots of resolved issues before /after repair documentation, supervisor confirmation.

This form is approved by the CDL academic supervisor

If you work at an external company or organization, the following "Health and Safety checklist" form must be completed before your placement can be approved.

**External Career Development Learning (PLACEMENT) PROVIDER
HEALTH AND SAFETY CHECKLIST**

Name of the Placement Provider (Company name): Bhusal Tech Traders Pvt. Ltd.
 Placement site Supervisor: Sasi Bhusal
 Supervisor's Position: Supervisor
 Address: Gatthghar Chowk, Madhyapur Thimi
 Email: bhusaltechtraders@gmail.com
 Telephone: 9801463145

	Yes	No
1 Do you have a written Health & Safety policy?		
2 Do you have a policy regarding health and safety training for people working in your undertaking, including use of vehicles, plant and equipment, and will you provide all necessary health and safety training for the student?		✓
3 Is the organization registered with? (tick as appropriate) (a) the Health & Safety Executive or (b) the Local Authority Environmental Health Department		✓
4 Insurance (a) Is Employer and Public Liability Insurance which will cover the duration of the placement? (b) Employer and Public Liability Insurance policy number _____ (c) Will your insurance cover any liability incurred by a placement student as a result of his/her duties as an employee?		✓
5 Risk Assessment (a) Have you carried out any risk assessment of your work practices to identify possible risks whether to your own employees or to others within your undertaking? (b) Are risk assessments kept under regular review? (c) Are the results of risk assessment implemented?		✓
6 Accidents and Incidents (a) Is there a formal procedure for reporting and recording accidents and incidents in accordance with RIDDOR (Reporting of Injuries, Disease & Dangerous Occurrence Regulations)? (b) Have you procedures to be followed in the event of serious and imminent danger to people at work in your undertaking? (c) Will you report to the university all recorded accidents involving placement students? (d) Will you report to the university any sickness involving placement students which may be attributable to the work.		✓

The above statements are true to the best of my knowledge and belief.

CAREER OBJECTIVE

Motivated and detail-oriented IT and networking student with hands-on experience in CCTV installation, network configuration, and technical support. Strong foundation in computer networking, cybersecurity principles, and DevOps tools, with a proven ability to apply theoretical knowledge in real-world environments. Seeking opportunities to contribute to secure, reliable, and efficient IT and networking solutions while continuing to develop professional and technical skills.

EDUCATION

Bsc (Hons) Computer Networking & IT Security	2025-Present
Islington College	
London Metropolitan University	
Kamalmarg, Kamalpokhari, Kathmandu	
SLC-Science	2021-2023
Little Angel's College	
National Examinations Board (NEB)	
Hattibann, Lalitpur	
SEE	2021
International Public School	
National Examinations Board (NEB)	

EXPERIENCE

Networking & IT Support Intern

Bhusal Tech Traders and Suppliers

- Assisted technicians in the installation and configuration of CCTV cameras.
- Performed basic network connectivity testing between PCs and Ethernet switches to ensure stable communication.
- Supported camera configuration and device integration, gaining hands-on experience with smart devices and security systems.
- Communicated with supervisors and team members to report task progress and materials used.
- Maintained basic documentation related to materials usage and on-site technical activities.

Figure 13: CV page1

TECHNICAL SKILLS

Networking Skills: TCP/IP, Network Configuration, DNS

Programming language: Java , python, Java scripts , html

Knowledge of DevOps tools such a GIT, Docker, Jenkins

Security Systems: CCTV installation and configuration, smart camera setup.

SOFT SKILLS

Strong communication skills

Time Management Skills

Adaptability

Teamwork Co-ordination

Problem Solving

Adaptability to new tools, devices and working conditions.

Willingness to learn and accept technical feedback.

Academics Projects

E-commerce Websites UI Design

Technologies Used: HTML, CSS, Java Script

Designed an intuitive and user-friendly interface for an e-commerce website, enabling online ordering and service requests for various products. Focused on creating a smooth user experience through clear navigation, responsive design, and simplified checkout processes.

Furniture Management System

Technologies Used: Python

Developed a computerized system for managing a furniture store's inventory and transactions. Implemented modular components including read, write, main, and operation modules to handle tasks such as data input/output, inventory management, and billing operations. The system enables reading and updating inventory records, generating invoices for purchases and sales, and providing a user-friendly interface for store operations.

Store Management System

Technologies Used: JavaDesigned a graphical user interface (GUI) for a store management system using Java Swing components. Implemented key features including event handling and exception handling, ensuring robust and interactive user interactions. The application was developed following Object-Oriented Programming (OOP) principles to promote modularity, reusability, and maintainability.

Fire Extinguishers System

Technologies Used: Arduino, IR Sensor, Motor , Relay etc.

Designed a smart fire extinguisher system using IoT devices to detect fire or abnormal temperature levels and trigger automatic suppression mechanisms. The system integrates sensors (such as flame, smoke, and temperature sensors) with microcontrollers to ensure real-time monitoring and alerting, enhancing fire safety and emergency response.

8.5 Evidence

Description: This evidence shows the chat logs of our group, feedback report from supervisor and presentation slides with our client.

8.5.1 Log1

Figure 16: Chat logs of whatsapp

This picture shows a WhatsApp group conversation used for internship coordination and daily work reporting at Bhusal Tech Traders Pvt. Ltd. the image demonstrates professional communication, accountability, real-time task reporting, and practical exposure to both technical and operational responsibilities during the internship period.

Figure 17: Chat logs of intern of group

This image shows a daily internship work log and task confirmation shared through the official WhatsApp group of Bhusal Tech Traders Pvt. Ltd. the image illustrates consistent daily reporting, hands-on technical experience in CCTV systems, effective coordination with supervisors, and professional engagement in both technical and operational tasks during the internship period.

Feedback [Bhusal Tech Traders Pvt. Ltd]

Name: Tapendra Singh	Designation: Network Engineer	
Role: Intern Team Member	Supervisor Name: Shashi Bhusal	

Learning Outcome (LO)	Feedback
LO1 – LO1 – Communication and Presentation Skills	Tapendra strengthened his communication abilities across technical and non-technical settings. He conveyed troubleshooting processes clearly during phone calls, face-to-face interactions, and team meetings. His presentation of updates and issue-resolution approaches improved clarity and demonstrated growing confidence in technical communication.
LO2 – Teamwork and Collaboration	Tapendra actively engaged with the IT team during system deployment and technical support activities. His cooperative approach in meetings and shared responsibilities contributed to effective teamwork and smooth project execution.
LO3 – Analytical and Troubleshooting Abilities	Tapendra demonstrated strong analytical skills by systematically identifying technical faults, determining root causes, and applying corrective measures. His troubleshooting reports and practical problem-solving supported reliable system performance.
LO4 – Time Management and Task Organization	Tapendra managed multiple IT support responsibilities efficiently, prioritizing tasks and meeting deadlines. His daily planning and progress tracking ensured timely completion of assignments and improved overall workflow.
LO5 – Adaptability and Flexibility with Tools/Technologies	Tapendra showed adaptability by learning and applying new tools and technologies introduced during the placement. He experimented with system testing, shared insights with the team, and aligned his work approach with evolving organizational requirements.
LO6 – Independent Learning and Skill Development	Tapendra enhanced his learning skills through self-study, certifications, and portfolio building. He consulted supervisors, used online resources such as tutorials and technical videos, and applied acquired knowledge to practical tasks.
LO7 – Security Management Skills	Tapendra developed skills in managing client security systems, including password resets and camera security configurations. He consulted technicians and applied best practices to ensure secure setups for clients.
LO8 – Configuration and Setup Skills	Tapendra gained practical experience in configuring cameras, PCs, servers, and switches for organizational use. His onsite work, validated by technicians, demonstrated competence in system setup and deployment.
LO9 – Structured Cabling and Network Management	Tapendra practiced cable management and RJ-45 connector crimping, ensuring organized and reliable networking structures. His hands-on involvement in structured cabling tasks improved technical precision and efficiency.
LO10 – Hardware and Software Troubleshooting	Tapendra strengthened his troubleshooting skills by diagnosing and resolving hardware and software issues in PCs, cameras, and peripheral devices. His maintenance logs and repair documentation reflected his ability to tackle technical problems effectively.

8.5.2 Log2

Description: This evidence shows the meeting with supervisor, meeting minutes and team collaboration report.

Team Collaboration Report

Company Name: Bhusal Tech Traders Pvt. Ltd

Section	Details
Project / Task Name	CCTV Installation and Network Setup (Agricultural Development Bank)
Start Date	05/11/2025
Completion Date	05/11/2025
Team Members Involved	Sanjeev Shrestha (Senior Technician), Abhishek Phuyal (Junior Technician), Raj Kumar Ram (Junior Technician), Saurav Kumar Sah (Intern), Tapendra Singh (Intern), Bikash Kumar Sah (Intern), Bibek Kumar Sahani (Intern Team Lead)
Objective	To install and configure a CCTV surveillance system and network infrastructure at the Agricultural Development Bank to ensure effective security monitoring and stable system performance.
Key Responsibilities	Bibek Kumar Sahani (Intern Team Lead): Coordinated team tasks, distributed work responsibilities, supported installation activities, monitored progress, and ensured timely completion. Sanjeev Shrestha (Senior Technician): Supervised technical operations and handled advanced configuration. Junior Technicians and Interns: Assisted in camera installation, cable routing, DVR configuration, network switch setup, and system testing.
Collaboration Process	Team coordination was maintained through regular communication and on-site discussions. Tasks were assigned based on skills and experience. Team members worked together during cable routing, equipment handling, and system testing to maintain workflow efficiency and installation quality.
Challenges Faced	Limited space for cable routing and managing multiple installation tasks within a short time period. Minor network connectivity issues during initial testing.
Solutions and Problem-Solving	Cable routing paths were adjusted through team discussion and planning. Network issues were resolved through collaborative troubleshooting and configuration adjustments under senior technician guidance.
Final Outcome	The CCTV installation and network setup were completed successfully within the scheduled time. All cameras were properly installed and tested. The system operated efficiently and met client requirements.
Feedback and Reviews	Positive feedback was received from the supervisor regarding teamwork, coordination, and professional conduct during the project execution.
Lessons Learned	Improved leadership, teamwork, communication, and coordination skills. Gained practical experience in handling real-world technical projects and understood the importance of collaboration in professional environments.

MEETING MINUTES [Bhusal Tech Traders Pvt. Ltd]

Date:	12th September 2025	Location:	Bhusal Tech Traders Office
Time:	11:00 AM	Requested By:	Shashi Bhusal (Supervisor)

MEETING ATTENDEES

1. Shashi Bhusal	2. Sanjeev Shrestha	3. Bibek Kumar Sahani
4. Saurav Kumar Sah	5. Tapendra Singh	6. Bikash Kumar Sah

AGENDA ITEMS

Agenda 01: Selection of Intern Team Lead

Agenda 02: Intern Task Assignment

Agenda 03: Work Guidelines and Safety Instructions

DISCUSSION	ACTION ITEMS
The supervisor explained the need for an Intern Team Lead to manage daily intern activities and improve coordination with technical staff.	Bibek Kumar Sahani will coordinate daily intern tasks and manage work scheduling.
Senior Technician provided input based on intern performance and technical involvement.	Saurav Kumar Sah will support cabling work and PC installation activities.
Bibek Kumar Sahani was selected as the Intern Team Lead due to strong communication skills and responsible work behavior.	Tapendra Singh will assist with CCTV installation and device configuration tasks.
Interns were distributed among technicians to improve workflow efficiency and task management.	Bikash Kumar Sah will support troubleshooting and site inspection activities.
Specific task assignments were made for cabling, PC installation, CCTV setup, troubleshooting, and site support activities.	Sanjeev Shrestha will monitor intern performance and provide weekly feedback.
Workplace safety guidelines and proper tool handling procedures were explained to all interns.	All interns will follow workplace safety rules and installation standards.

NEXT MEETING

The next coordination meeting will be held on **13th November 2025**.

The meeting will focus on reviewing intern performance and overall work progress.

Team members are required to prepare updates on assigned tasks before the meeting.

ADDITIONAL NOTES

All participants agreed to the assigned roles and responsibilities.

Emphasis was placed on teamwork, discipline, and effective communication.

Safety compliance and professional behavior at client sites were highlighted as priorities.

Bhusal Tech Traders Pvt. Ltd.

CCTV Installation Project Report

Client: Asha Laghubitta Bittiya Sanstha Ltd.

Submitted by: Razz Kumar Mahara | Bhusal Tech Traders Pvt. Ltd.

Date: 2082/03/31

1. Introduction

Asha Laghubitta, a prominent finance firm with 132 branches throughout Nepal, hired Bhusal Tech Traders Pvt. Ltd., situated in Gatthaghar, Bhaktapur, to supply and install a strong CCTV surveillance system for improved security and remote monitoring.

2. Project Scope

- There are 132 branches overall, with seven more being developed.
- The branch distribution consists of 14–15 stations, each of which covers 7-9 branches.

As per the Branch Configuration:

- Two to three 2K EZVIZ H6c cameras.
- One CS-X5S 4CH EZVIZ NVR.
- Installation of Network Switch.
- Patch Cables, Power Adapters And Cat6 Cabling for Safe Connectivity.

3. Power Backup

The backup depends on the current system (such as the inverter) in each branch.- This project did not include the installation of a second backup system.

4. Remote Monitoring Solution

For centralized monitoring, the Head Office's primary EZVIZ account was created. The system of each branch is connected to the primary account and shared with the sub-account of the corresponding Branch Manager.

Dedicated EZVIZ accounts were made for every station in order to overcome the EZVIZ Studio PC client limit (24–25 cameras see at once). Every station has a unique EZVIZ and Gmail account. For effective monitoring, this structure enables the Head Office to access station-specific accounts.

****Note on the Creation of the Stations**** The number of stations was planned based on the EZVIZ Studio software's restriction of viewing a maximum of 25 cameras per login at once, even

Figure 28:Project report of asha Laghubitta

****Figure 1** Field Team of Bhusal Tech Traders with Branch Manager**

****Figure 2 ** Arrangement of Cameras, NVR and Switch**

Figure 29:Status of task of asha laghubitta project

5. Network & System Security

- Every NVR is protected with a standard password: Nepal (977)
- For all EZVIZ and Gmail accounts we've used : Asha@977

Best Practices for Credentials:

- Change passwords every three to six months.
- Only authorized personnel should be given access to credentials.
- Maintain a safe record in a physical log or an encrypted file.
- If a staff member's role changes, update right away.

6. Credentials Summary

<i>Account Type</i>	<i>Username/Email</i>	<i>Password</i>	<i>Remarks</i>
Branch NVR (each branch)	admin	Nepal@977	Same for all NVRs; change periodically
Station EZVIZ Accounts	[Station-specific Gmail accounts]	Asha@977	Eight to nine branches per station
Head Office EZVIZ Account	asthalagubhitta@gmail.com	Asha@977	All branches are accessible; master admin

Figure 30: project report of task status and record

Project Overview and Completion Status

Bhusal Tech Traders Pvt. Ltd. was commissioned to install a surveillance system across **132 branches** of Asha Laghubitta throughout Nepal.

- **Overall Status:** The vast majority of branches have been successfully finished.
- **Pending Work:** Seven branches are currently in the installation phase and are expected to be completed shortly.
- **Station Work-in-Progress:** Some branches within **Station 7** and all branches within **Stations 10 and 11** are still under development.

Activity and Deployment Breakdown

The project utilized a "Station" model to manage software viewing restrictions and geographical distribution.

Centralized Monitoring Setup

- **Master Account:** Created a primary EZVIZ account for the Head Office to allow master admin access to all branches.
- **Station Logic:** Developed **13 stations** (reduced from the original 14-15) to bypass the EZVIZ Studio PC client limit of viewing only 25 cameras at once.
- **Branch Access:** Each branch system is shared with the corresponding Branch Manager's sub-account.

Deployment by Station (Completed/Active)

Station	Location	No. of Branches	Camera Count (Typical)
1	Pedaguna	8	3-4 per branch
2	Itahari	9	2-3 per branch
3	Rupani	8	3 per branch
4	Bardibas	8	3 per branch
5	Garuda	8	3 per branch
6 & 6(A)	Birgunj	15 Total	2-3 per branch
7	Hetauda	9	2-3 per branch (Partial completion)
8	Butwal	8	3 per branch

MEETING MINUTES [Bhusal Tech Traders Pvt. Ltd]

Date:	13th November 2025	Location:	Bhusal Tech Traders Office
Time:	10:30 AM	Requested By:	Shashi Bhusal (Supervisor)

MEETING ATTENDEES

1. Shashi Bhusal	2. Sanjeev Shrestha	3. Bibek Kumar Sahani
4. Saurav Kumar Sah	5. Tapendra Singh	6. Bikash Kumar Sah

AGENDA ITEMS

Agenda 01: To assign a new client site project.

Agenda 02: To select a Site In-Charge.

Agenda 03: To discuss CCTV installation planning, cabling work, and task distribution among team members.

DISCUSSION	ACTION ITEMS
The supervisor explained the new client site requirements, including CCTV installation and network cabling needs.	Bibek Kumar Sahani will supervise site activities and manage intern coordination.
Dome cameras, bullet cameras, PoE switch setup, and proper cable routing requirements were discussed.	Abhishek will handle network setup and cable termination tasks.
Bibek Kumar Sahani was selected as Site In-Charge based on leadership skills, previous performance, and coordination ability.	Raj will support camera mounting and testing activities.
Responsibilities of the Site In-Charge were explained, including on-site supervision and daily progress reporting.	Saurav Kumar Sah will assist with structured cabling and conduit pipe installation.
Task distribution was finalized for network setup, camera installation, structured cabling, DVR configuration, and troubleshooting support.	Tapendra Singh will support DVR and camera configuration tasks.
Safety procedures for ladder usage, tool handling, and camera installation were reviewed.	Bikash Kumar Sah will manage power connections and provide troubleshooting support.

NEXT MEETING

The next review meeting will be held on **23rd December 2025**.

The meeting will focus on site progress and CCTV installation status review.

ADDITIONAL NOTES

All team members agreed to the assigned roles and site responsibilities.

Proper coordination between technicians and interns was highlighted to ensure smooth project execution.

Analysis of the HIKVISION DVR File System

Jaehyeok Han, Doowon Jeong, and Sangin Lee

Center for Information Security Technologies (CIST)
Korea University, Anam-Dong, Seoungbuk-Gu, Seoul, Republic of Korea
{one01h, dwjung77, sangjin}@korea.ac.kr

Abstract. The video security market has recently seen a great expansion in addition to an increasing usage of the Digital Video Recorder (DVR), a device for storing and managing video data on a hard disk under file systems. This study first analyzes its file system for evaluating the DVR and examines the HIKVISION, a video surveillance product supplier, and its proprietary file system on the DVR that has yet been widely recognized by the market. Thus, this paper comprehensively analyzes the HIKVISION DVR file system and proposes a reliable method for digital forensic analyses.

Keywords: Digital forensic, File system, DVR, HIKVISION

1 Introduction

In recent years, video surveillance systems are widely used for various purposes. An embedded DVR (Digital Video Recorder), one of video surveillance systems, is used to monitor behavior, activities, or other changing information. In particular, general DVRs record video data in a digital format on a mass storage device.

Numerous DVRs use well-known file systems, such as FAT [1] and XFS [2]. However, the HIKVISION [3] products use its own file system, assumedly for increasing the efficiency of video management and copy protection. This study temporarily named the system as a HIKVISION file system because it does not have an official name. The HIKVISION file system is a simple file system compare to other file systems; the HIKVISION file system excludes some of file operations and includes only the necessary functions. For example, in the HIKVISION file system, it is not possible to delete a file or change a filename. Despite its high market shares, the HIKVISION has yet conducted any related digital forensic analysis. [4] tried to obtain video data in the hard disk using keywords of frame, however, there is no discussion about the file system and storage mechanism.

Therefore, this study identifies the structure of a HIKVISION file system. This study uses a video file format [5] and the reverse engineer manufacturer's application software [6] to analyze the DVR hard disk storage system. The video compression format also comprises a mechanism to extract meaningful information from video data fragments [7]. After identifying the file system, this study conducts an operation test on the file system to analyze the system in detail. This study demonstrates the structure of a HIKVISION file system and proposes a reliable method to access video

Figure 37:Articles of guidance of Hikvision 1

Fiigure 38:Articles of guidance of Hikvision 2

signature values of the file system is 'HIKVISION@HANGZHOU (0x48 49 4B 56 49 53 49 4F 4E 40 48 41 4E 47 5A 48 4F 55)' as shown in Fig. 2. The Backup Master Sector is located next to system logs and stores exactly the same data.

The data in each cell is stored by Little-endian systems. The Master Sector defines the followings : the capacity of a hard disk (0x25433D6000), offset and size of the system logs (0x3D13200 and 0xF42C00), offset to the video data area (0x4CE000), size of a data block (0x400000), total number of data blocks (0x94), offset of the HIKBTREE (0x25433BDC00), size of the HIKBTREE (0x6000), time of system initialization (0x37227754), and Others. The hexadecimal values in the brackets are the values of samples as shown in Fig. 2.

The *time of system initialization* in the Master Sector is referred as the last system initializes the UNIX time in the UTC. Since the DVR does not provide a delete function, new video data can only be recorded after initializing or overwriting of the system. Thus, this value could be used as an important factor as previously identified by investigators for anti-forensic usage such as in the case, where the time records are fabricated and misused as digital evidence.

The diagram illustrates the layout of a hard disk, showing sectors, tracks, and data blocks. The top part shows a grid of sectors (0-15, A-F) with a 'Signature' field. Below this, the 'Capacity of a hard disk' is shown as a grid of sectors (00-0F, 00-0F). The bottom part shows the 'Offset to System logs' and 'Size of System logs' fields. The 'A total of data blocks' section shows a grid of data blocks (00-0F, 00-0F). The 'Offset to HIBTREE1' and 'Offset to HIBTREE2' fields are shown. The 'Size of a data block' and 'Offset to Video Data Area' fields are also indicated. The bottom of the diagram shows the 'Time of system initialization' as 32 22 77 54.

Fig. 2. An example of Master Sector.

2.2 System Logs

The system logs have system logs information about the events and condition of a DVR. By analyzing this, it is possible for users to discover the operation history and track the DVR performance. Offset to the system logs is defined in the Master Sector.

Feedback [Bhusal Tech Traders Pvt. Ltd]

Name:	Tapendra Singh	Designation:	Network Engineer
Role:	Intern Team Member	Supervisor Name:	Shashi Bhusal

Learning Outcome (LO)	Feedback
LO1 – LO1 – Communication and Presentation Skills	Tapendra strengthened his communication abilities across technical and non-technical settings. He conveyed troubleshooting processes clearly during phone calls, face-to-face interactions, and team meetings. His presentation of updates and issue-resolution approaches improved clarity and demonstrated growing confidence in technical communication.
LO2 – Teamwork and Collaboration	Tapendra actively engaged with the IT team during system deployment and technical support activities. His cooperative approach in meetings and shared responsibilities contributed to effective teamwork and smooth project execution.
LO3 – Analytical and Troubleshooting Abilities	Tapendra demonstrated strong analytical skills by systematically identifying technical faults, determining root causes, and applying corrective measures. His troubleshooting reports and practical problem-solving supported reliable system performance.
LO4 – Time Management and Task Organization	Tapendra managed multiple IT support responsibilities efficiently, prioritizing tasks and meeting deadlines. His daily planning and progress tracking ensured timely completion of assignments and improved overall workflow.
LO5 – Adaptability and Flexibility with Tools/Technologies	Tapendra showed adaptability by learning and applying new tools and technologies introduced during the placement. He experimented with system testing, shared insights with the team, and aligned his work approach with evolving organizational requirements.
LO6 – Independent Learning and Skill Development	Tapendra enhanced his learning skills through self-study, certifications, and portfolio building. He consulted supervisors, used online resources such as tutorials and technical videos, and applied acquired knowledge to practical tasks.
LO7 – Security Management Skills	Tapendra developed skills in managing client security systems, including password resets and camera security configurations. He consulted technicians and applied best practices to ensure secure setups for clients.
LO8 – Configuration and Setup Skills	Tapendra gained practical experience in configuring cameras, PCs, servers, and switches for organizational use. His onsite work, validated by technicians, demonstrated competence in system setup and deployment.
LO9 – Structured Cabling and Network Management	Tapendra practiced cable management and RJ-45 connector crimping, ensuring organized and reliable networking structures. His hands-on involvement in structured cabling tasks improved technical precision and efficiency.
LO10 – Hardware and Software Troubleshooting	Tapendra strengthened his troubleshooting skills by diagnosing and resolving hardware and software issues in PCs, cameras, and peripheral devices. His maintenance logs and repair documentation reflected his ability to tackle technical problems effectively.

Team Collaboration Report

Company Name: Bhusal Tech Traders Pvt. Ltd

Section	Details
Project / Task Name	CCTV Installation and Network Setup (Agricultural Development Bank)
Start Date	05/11/2025
Completion Date	05/11/2025
Team Members Involved	Sanjeev Shrestha (Senior Technician), Abhishek Phuyal (Junior Technician), Raj Kumar Ram (Junior Technician), Saurav Kumar Sah (Intern), Tapendra Singh (Intern), Bikash Kumar Sah (Intern), Bibek Kumar Sahani (Intern Team Lead)
Objective	To install and configure a CCTV surveillance system and network infrastructure at the Agricultural Development Bank to ensure effective security monitoring and stable system performance.
Key Responsibilities	Bibek Kumar Sahani (Intern Team Lead): Coordinated team tasks, distributed work responsibilities, supported installation activities, monitored progress, and ensured timely completion. Sanjeev Shrestha (Senior Technician): Supervised technical operations and handled advanced configuration. Junior Technicians and Interns: Assisted in camera installation, cable routing, DVR configuration, network switch setup, and system testing.
Collaboration Process	Team coordination was maintained through regular communication and on-site discussions. Tasks were assigned based on skills and experience. Team members worked together during cable routing, equipment handling, and system testing to maintain workflow efficiency and installation quality.
Challenges Faced	Limited space for cable routing and managing multiple installation tasks within a short time period. Minor network connectivity issues during initial testing.
Solutions and Problem-Solving	Cable routing paths were adjusted through team discussion and planning. Network issues were resolved through collaborative troubleshooting and configuration adjustments under senior technician guidance.
Final Outcome	The CCTV installation and network setup were completed successfully within the scheduled time. All cameras were properly installed and tested. The system operated efficiently and met client requirements.
Feedback and Reviews	Positive feedback was received from the supervisor regarding teamwork, coordination, and professional conduct during the project execution.
Lessons Learned	Improved leadership, teamwork, communication, and coordination skills. Gained practical experience in handling real-world technical projects and understood the importance of collaboration in professional environments.

 Shashi Bhusal
 Supervisor
